

The Terramat Heatmat

The Terramat heatmats are the most widely used vivarium heaters in the world. They are all hand made to the exacting European standards. All meet the requirements of the 73/23/EEC safety directive and carry the CE mark. They also conform to European Norms EN60335-1. Klasse II / IPX4.

Terramat Heatmats produces infrared warmth with a long wavelength

This wavelength is invisible for the human eye and heats up objects instead of the air. This way of heating is equal to the way the sun heats; it heats objects which come in the radiation, but the air temperature stays much lower. Reptiles take on this heat as in their natural environment. The Terramat Heatmat heats up, but produces a comfortable heat, where the animal can lie up or under. When the Heatmat is used in the normal circumstances, the animal will not be hurt.

Terramat Heatmat can be used without a thermostat in many circumstances. For animals who feel comfortable with a certain temperature and for animals who cannot stand a very high temperatures, a thermostat should be connected to the Heatmat.

Also when you have your doubt about the above, it is sensible to connect a thermostat.

The Terramat Heatmat gives comfortable warmth. But there are kinds of animals that need a higher temperature to feel good. For these animals now elements as the Heatel Basking Plate are available. Always let yourself be informed by an exotic animal-specialist, who knows with which temperature the animal feels at his best

You have to take some important things in account when using the Terramat Heatmat:

- Place the Terramat Heatmat under the vivarium and make sure that the filling (“substraat”) in the terrarium is not too thick.
- Make sure that the Heatmat never takes up more than halve or a third of the total terrarium surface. The animal must have the chance to lie on colder places.
- The Terramat Heatmat is easy to clean with a wet cloth. Clean it often, so that nothing can stick to the Heatmat, which would cause the warmth not to come through. Make sure to pull the plug while cleaning.

A great alternative for bulbs is the Terra Heat Plate this is a Infr Red Heating panel and the animals who needs a lot of heat loves this kind of heating because this gives the most natural heat to the animal. This plates we have in two sizes:

10013 Heating Plate 406x190x19 40W

10014 Heating Plate 500x320x19 100W

The Terramat Heatmats are available the following measurements and capacities:

Article nrs.	Measurements	Capacity
10001	100 x 130	2,5W
10002	130 x 274	5W
10003	258 x 274	12W
10004	388 x 274	18W
10005	516 x 274	23,5W
10006	646 x 274	30W
10007	770 x 274	37W
10008	1170x275	56W
10009	390 x 144	9W
10010	520 x 150	12W
10011	775 x 144	18,5W
10012	1170x150	29W
